On September 1, 2010, AutoCAD began shipping to the Apple App Store as a part of the App Store preview program. Version history AutoCAD was originally released in 1987 as AutoCAD 1.0 and has been released in 13 versions. It is currently in its 15th version release, AutoCAD 2010. Versions File and application formats AutoCAD files use the AutoCAD DXF file format for content, and are typically in the DXF/DWG (DWG or Drawing) format, but can be saved in several other formats. AutoCAD 2013 and later use a different drawing format called DWG2. AutoCAD 2016 added the DWG3 format, which has a format similar to the AutoCAD 2016 DWG2 file format but is backwards compatible with the older DWG and DXF formats. In AutoCAD 2010, only objects saved in the .DWG file format were able to be opened and viewed in AutoCAD 2010. In AutoCAD 2013, a .DWG file can be saved in the older .DXF format, or in the newer .DWG3 format. Only objects saved in the .DWG3 format can be opened and viewed in AutoCAD 2013. In AutoCAD 2014, a .DXF file can be saved in the older .DWG file format, or in the newer .DXF-DWG3 format. Only objects saved in the .DXF-DWG3 format can be opened and viewed in AutoCAD 2014. In AutoCAD 2015, a .DXF file can be saved in the older .DWG file format, or in the newer .DXF-DWG3 format. Only objects saved in the .DXF-DWG3 format can be opened and viewed in AutoCAD 2015. AutoCAD 2017 added .DXF-DWG3 as a third file format to .DWG and .DXF. AutoCAD 2018 added a .DXF- a1d647c40b

Pterosaur Community The pterosaurs are the long-necked, long-tailed reptiles from the Jurassic and Cretaceous periods of Earth's history. These ancient reptiles are generally classified into two groups: those with long, straight, and tapering tails and those with narrow, bulky tails that tapered to a point. The tails were used to stabilize and control the flapping flight of the animals, while the forelimbs were used for attack and defence. Flight was by means of rapid wing beats. One of the most remarkable features of the pterosaurs was their ability to glide in flight, a skill which remained unknown until the species were described. The pterosaurs flourished during the Jurassic and Cretaceous periods, when there were many ecological niches to fill. Some species included diggers, burrowers, gliders and scavengers, while others may have been nocturnal predators and insectivores. Description The pterosaurs are characterized by a neck that is longer than their body and a long, slender, tapered tail that is longer than their body. There are only about one hundred pterosaur species known, mostly from fossils found in China, but pterosaurs were much more diverse in the past. Some of the largest known species could reach the length of a small car. The biggest known species, however, was the two meter long Quetzalcoatlus northropi, which lived in the Late Cretaceous. One species of pterosaur, Ornithodesmus fuyuanensis was estimated to have been larger than a blue whale. The pterosaurs were reptiles and were warm-blooded. Taxonomy
