What's inside AutoCAD is available in two versions: The Standard version comes with one set of libraries, the Design Standard version comes with one set of libraries and one set of productivity tools. The libraries offer tools for 2D and 3D design, drafting, architecture, engineering, animation, simulation, and more. The productivity tools include a feature-rich drawing environment with tools for 3D modeling, and features for managing your own business or school. For video tutorials, see our past coverage of AutoCAD at our sister site. For an overview of AutoCAD basics, see our step-by-step guide. For even more information about AutoCAD, check out our other articles. Design documentation The main window of the Design Standard version of AutoCAD is a combination of four panels, shown in the figure below. The panels are: Layout, an area used to display layouts, symbols, and other elements that you need for 2D and 3D drawing. 3D models can be viewed here. Annotation, an area used to display annotations on the model. Navigator, an area used to display the property pages for objects in the model. View, an area used to view the viewport and current drawing environment. The standard panel layout in AutoCAD Design Standard can be customized through the Preferences dialog, shown in the figure below. You can use the Preferences dialog to change the size of each panel and set the default dimensions for the viewport. The viewport is the area of the layout that is displayed in the Layout panel. In the figure below, the viewport size is set to 600 x 400 pixels. When you draw in the viewport, the Design Standard version of AutoCAD displays the area that is currently visible in the viewport. The Set Viewport Preference dialog is used to change the default viewport size and layout. In addition to these three panels, the Layout panel also has the following controls: Layout Panel Controls Panel Size, a button used to change the viewport size. The viewport will only be resized if you save the file with your changes. Sizing of the Layout Panel can be customized with the Preferences dialog. Layout Panel Controls Panel Layout, a drop-down list of the various layout options available to the user

A 49% participation rate is a healthy one and we all should be interested in seeing whether that rate holds steady. The state's pay-to-participate health care plans have been criticized for the rates of participation and the enrollment criteria used for determining premium levels. The most common enrollment criteria are the minimum annual income requirement, with premiums based on the percentage of an individual's annual income that exceeds \$25,000 for single coverage or \$30,000 for family coverage. There is a flat-dollar requirement, which is based on gross income and therefore not affected by an individual's level of income. Individuals who do not meet the income criteria have a choice between forgoing health insurance entirely or paying a surcharge. The state was one of the first to offer health insurance in the nation, and today remains the largest. By offering a choice of health insurance for all individuals in the state, the state's MCO system is a model for other states that are considering similar reforms. The state's system has been praised for efficiency and cost-containment, since most of the state's uninsured can be housed within the small fraction of the state's MCO market. The state's program also results in better health outcomes than expected. In most recent years, the state's participation rate has varied from about 50% to 54%. Participation rates and the distribution of premiums within the state's market are closely monitored a1d647c40b
