BasicDiary is portable and can run on laptops or desktop computers. It can also be installed as a service, enabling it to run on Windows Vista/7. The applications version is currently 1.6 and can be run in 32 or 64 bits operating systems. BasicDiary requires at least Windows XP but does not require any third-party application to be installed. In addition, its interface can be configured from its main window and it can be customized, supporting both themes and skins. One unique aspect of BasicDiary is that it can be installed as a free service on Windows Vista/7. All the data will be stored on a custom-made memory pool that is safe from third-party attacks. Although if you install BasicDiary's service on a removable drive, the system is not very secure as it is accessible to all the users on the computer. BasicDiary is compatible with all the newest operating systems, such as Windows 7/8/8.1. To get the latest version of the application, you can visit our website at 91bb86ccfa

Complete your diary with a simple application designed to facilitate text reading. Use the integrated text editor, which does not include any formatting options whatsoever, but you just paste or write the text and you're done. You can easily read text notes, which are more compact and more user friendly than simple text documents. Attach multiple files to each entry (for instance, a picture that is relevant for the story), which can be then exported and saved locally. A built-in calendar makes it easy to navigate through entries. The 'goto' function and the advanced search tool complete the feature set, enabling you to jump from one date to another, without using the calendar. Actually, the 'Find' dialog enables you to find a record that contains a specific keyword within the title, the content, the attachments or the attribute list. The application comes with a built-in password manager, which enables you to have a safe and secure database. Encrypt the database with any password of your choice to guarantee all diary data security. Enable or disable automatic closing of the application in case it is not used for a certain period.

Time to Install: Time to Play: Source: Hotline Miami 2: Wrong Number gameplay Today I've got a different review, this time of a 2D horror game called Hotline Miami 2: Wrong Number. I had the game pre-ordered from Green Man Gaming for quite some time now, but when I was done testing it I ended up cancelling the pre-order and waiting a little bit longer to get the game myself. Of course, this ended up being a good decision because the game launched today and
