The question of whether Mesa County should adopt a child — any child — may be the most controversial issue on the ballot in November's elections. County commissioners are considering a measure that would add an amendment to the county charter that would allow the county to draft, adopt and fund a child. There is no current legal authority in the county to adopt a child or a group of children. There is no count of how many children the county has adopted over the years, but it's likely to be more than one and perhaps hundreds. The opposition to the measure grew last week. Boyce, a former county commissioner and political observer, believes the county has the financial capability to adopt a child. Ault and the Mesa County Republican Party are opposed to the measure. "It's kind of like playing with fire," Ault said. He pointed out that the current

county charter does not contain the word "children," a term that is required by the Colorado Open Meetings Act. He also said the measure would put the county in a position to decide to adopt a number of unwanted children. "It gives the county the opportunity to have more than one child,� 09e8f5149f

I want to use something like Sqlite in RavenDB. To be able to save to database you need to define which method you want to use. For example for Sqlite you could use: IDocumentStore documentStore = new EmbeddableDocumentStore { Database = "*:memory:" }; But I want to use something like: IDocumentStore documentStore = new DocumentStore { Database = "myDatabase" }; How is that possible? A: You can't really define two different methods for the same action. If you are not keen on using a non-embeddable store for the database, you can define a own DomainDataStore which does just that. Pages Friday, 13 June 2016 GenieProof's GenieSeals: How to Create Magic in your Cryptoseals Cryptoseals are those fabulous little containers that CrypticSealTech makes to help seal and reseal your cards. They are small, fit your cards perfectly and really do help to keep your cards safe. I decided to create a post to show you how you can create your own. The first step is to buy your containers from either www.CrypticSealTech.co.uk or www.CrypticSealTech.com. There are two designs available, my favorite is the strawberry design pictured above. You can buy one or a few or more to suit your collection. The Strawberry design has a jaunty strawberry on the top. Lubricant comes in many forms. My idea of the perfect lubricant is to use something that makes it easier to get your cryptoseal on your cards but also leave the seal alone when you take your card off. A combination of coconut oil and lanolin oil does exactly that. It makes it nice and easy to get the sealing material on your cards but it also leaves your cards sealed. I make my seals from the same jelly that comes on the lollipop sticks. You put the seal on by twisting the two parts of the stick together. You then turn the jelly around to put it on your card.
