AutoItLibrary is a Python keyword library that enhances

Robot Framework. It provides keywords based on AutoIt's COM interface, which is a freeware tool for automating the Windows graphical user interface. If you want to perform screenshorts, AutoItLibraryrequires you to first have PIL installed, which is an open source Python Image Library tool. Before getting started with the installation you should first make sure you are using ActivePython, which comes with the Python for Windows extensions such as win32com. Next you'll need to install Mark Hammond's Python for Windows Extensions. AutoItLibrary manages to install its own files and all the required parts from AutoIt. T get started with the instalation process, just unzip the downloaded source release file into a directory of your choice. Afterwards, open a command window in that directory (Shift + Right click in the folder), and type in python setup.py install. Please note that if you are running Windows Vista and Windows 7, you must be running the installation with Administrator rights. Please Note: If you are running Windows Vista or Windows 7, you must be running the installation with Administrator rights.
