With the free trial version you can try the different features and functions of this software. Also, the trial version allows you to create new TIFF files. TIFF Splitter has an interface that is very easy to use. In the main window you can choose between two distinct naming schemes: The first name scheme is a little bit less readable but has a better performance in terms of speed and efficiency of split images. If an image is smaller than the original, the name of the original image is printed in front of the image name of the split files. The second name scheme also has a better speed and efficiency, if an image is larger than the original. In this name scheme the old tiff image name is printed in front of the image name of the split files. As mentioned above, TIFF Splitter can support both the compressed TIFF format and the uncompressed TIFF format. TIFF Splitter can also process the images according to the white balancing, the auto exposure and the color space. The software can be used to split images that are png, gif, jpg, bmp, jp2, psd, emf, vcf, ole, exr, tga, srf, rar, zip, gz, rar
