You can easily create compact, familiar, and fast spreadsheet applications that look and feel like Microsoft Excel and you can open Excel files directly within your application. Besides the traditional view, you can easily export your spreadsheet to different formats like XLS or CSV. Spread WPF Silverlight gives you the power to perform data analysis, calculate values within cells and a variety of mathematical functions, print, preview and copy cell values to other cells in just a few clicks. This application, your Microsoft Excel moment, lets you create a professional and reliable Excel spreadsheet or report. Install Spread WPF Silverlight Toolbar The Spread WPF Silverlight product consists of a Standalone installable.exe application. It can be integrated with Visual Studio. To integrate Spread WPF Silverlight with Visual Studio, you must follow these steps: 1. Open the.EXE file from the installation package and

double-click to install the application. 2. Start Visual Studio and open an existing project with a project name that corresponds with the product name. 3. Select the Project -> Add New Item and select Spread WPF Silverlight Library from the select list. 4. Select the type of library you need. For example: Silverlight Panel, Custom Control, User Control, Class Library, etc. 5. Select the Target Framework as Silverlight. This will open the project in the familiar Visual Studio window with the item window and the design view. This is because the product is not a standalone project. You can open the.EXE file from the command window, cd to the directory with the.EXE file and run it as is. Deploying the Application: The product consists of a .NET Framework class library and a binary assembly. To create an installer for the product, you need to follow the steps provided in the ReadMe.txt file. To simplify the deployment of the application, a single EXE file and a simple MSI file are included in the installation package. To install the.EXE or MSI file, you need to follow the

steps provided in the ReadMe.txt file. Introduction: This article will look at how to use the latest version of Microsoft Access in an Internet facing Web Application. We will use the latest version of Microsoft Access (2007) to store client details in a database to read and write from the database. The setup of the client details is very simple. The setup is comprised of two pages.
