Category:Home and personal software – application software Category:Remote computingQ: Do not submit a blank values in form tag I am working on create a create form, and my problem is when i click on submit the blank values also sends in the form. I have used name attribute as tag like this. I have used![Trim(document.querySelector('.btn').value)] if the values are there, but in my case i have three values so how can i prevent all blanks. A: You can use jQuery's attribute value selector to test if the values are empty. $("input[name='text1']:empty").attr("disabled","disabled"); Same works for the other fields. EDIT: Also for security reason, you can do this: if ($("input[name='text1']:empty").length) { $("input[name='text1']").attr("disabled","disabled"); } For this case, it is good to have a variable, that is true if there are empty elements and make this check on page load. Q: No current address for the push messages in GCM First, I'm not pro of java. I'm a android developer. I'm learning now on how to use the GCM. 09e8f5149f

What's New In HsCADView?

The World of Cad Design: Product Design : CAD Design for manufacturing, service parts and equipment, it is a special form of drawing that uses a two dimensional graph to illustrate the different parts of a product. CAD Design can be used to create a single solid geometric shape, or by combining multiple solids into one solid. CAD Design can be used to create three dimensional shapes which can be used for designing parts of machinery, vehicles, structures, machinery etc. CAD Design can also be used for creating technical drawings, drawings of welding, fabrication and moulding. Engineering Design : CAD Design for manufacturing, service parts and equipment, it is a special form of drawing that uses a two dimensional graph to illustrate the different parts of a product. Engineering Design can be used to create part details and assembly instructions and more importantly these designs can be printed directly to scales. Mechanical Design : CAD Design for manufacturing, service parts and equipment, it is a special form of drawing that uses a two dimensional graph to illustrate the different parts of a product. Mechanical Design can be used to create single parts, drawings of machining, assembling instructions and much more. It is suitable for creating full blueprints, car designs and instructions, instructions for almost any kind of fabrication. Electrical Design : CAD Design for manufacturing, service parts and equipment, it is a special form of drawing that uses a two dimensional graph to illustrate the different parts of a product. Electrical Design is used for design of logic circuits and electrical schematics. It can also be used for creating drawings of electrical circuits, wiring diagrams, schematic circuit diagrams, and much more. Autocad Design : CAD Design for manufacturing, service parts and equipment, it is a special form of drawing that uses a two dimensional graph to illustrate the different parts of a product. AutoCAD Design for machinery, vehicles, structures and more. It can also be used for creating drawings of mechanical designs, weldings and more. Cartography Design : CAD Design for surveying, mapping and GIS, it is a special form of drawing that uses a two dimensional graph to illustrate the different parts of a product. Cartography Design can be used to create all kinds of maps, topographical, architectural and geographical maps. It is used for creating vector formats, georeferencing and much more. Job Design : CAD Design for mechanical design jobs, it is a special form of drawing that uses a two dimensional graph to illustrate the different parts of a product. Job Design is used for creating design
