Laptops Laptops are a snap to use on the road. A solid-state hard drive, keyboard, and mouse are all you need. Laptops are great for on-the-fly editing and for storing your files, since they don't get dirty like hard drives do.

In this post, we will take a look at how you can edit a JPEG image using Photoshop Elements in the simplest way possible. **STEP 1.** Open the image You need to have Photoshop Elements or Photoshop downloaded and installed on your computer. **STEP 2.** Open the picture

in Photoshop Elements In Photoshop Elements, click the file > Open and follow the steps below to open the picture in Photoshop Elements: On the left side, click Image. Click “Open an Image” under the “Load” menu. On the right side, navigate to the location where you want to find the picture. For example, if it is on your desktop, you can right click and select Open. If the picture is not displayed on your computer’s hard drive, you can download it by clicking and dragging the picture from your hard drive’s “Downloads” folder or by right clicking and selecting “Save image As...” STEP 3. Resize the image Because a JPEG file always has square pixels, you need to crop the edge of the picture to make it fit in

your desired size. If the image's horizontal or vertical dimensions are not the same as the size you want to use, you can first resample it to the desired size and then crop it to fit the new desired size. In Photoshop Elements, you can resize the photo by clicking and dragging one of the edges or by resizing the image while holding down the Ctrl and Alt keys (Windows) or the Command and Option keys (Mac). To crop the picture, you can use the Magnetic Lasso Tool and select from one of the four directions (top-left, top-right, bottom-left, bottom-right) and then click the crop button. STEP 4.

Adjust color and brightness Now that you have resized the image, you can adjust its color and brightness settings. In

Photoshop Elements, to adjust the photo's color, go to Image > Adjustments > Adjust Color. You can also use the adjustments in Photoshop's preferences instead. To adjust its brightness, go to Image > Adjustments > Brightness and Exposure. **STEP 5.** Add text and make it bigger You can add text to the picture to create a title. When you want to add text, you need to make sure the picture

Router 40.1 Upgrades and Second Generation Iommu In this post, I'll show you how to upgrade the 6th Generation Intel x86-based server (router 40.1) on HPE 2U server, and also how to enable the Second Generation Iommu. HPE 2U NanoServer x540d Requirements sudo ip link set dev eth0 up sudo ip link set dev eth0 address 10.0.0.1/24 Step 1: Information About the Server sudo ip link show dev eth0 Step 2: Upgrading the 4th Generation Intel x86-based Server To upgrade the 4th Generation Intel x86-based server (router 40.1), follow the steps below: To switch the NIC (Network

Interface Card) to the old PCI-E first, use the `ip link set dev eth0 up` command. Step 3: Upgrading the 6th Generation Intel x86-based Server To upgrade the 6th Generation Intel x86-based server, follow the steps below: To switch the NIC (Network Interface Card) to the new PCI-E first, use the `ip link set dev eth0 up` command. Step 4: Upgrading the Second Generation Iommu To upgrade the Second Generation Iommu, follow the steps below: To enable the Second Generation Iommu, there are two ways to do it. The first one is to use the `Dmesg` command: `HPE 2U NanoServer x540d` If you want to use the Intel Management Engine (ME), then you can use the `ICAP` command: `ICAP: Determines the Intel`

Management Engine version and capabilities. (Optional.) The Intel Management Engine (ME) is firmware that provides system BIOS functionality. It is used to monitor the system and to provide IT Management capabilities. You can also use this command to find out the license plate number of the ME. If you only want to use the IOMMU capabilities of the Second Generation Iommu, then you can use the following command: `sudo echo 1 > /sys/devices/platform/iommu_v2/tls_common/hpq/hpq_cap` • To control the enable/disable HPE IOMMU V2 features, you can use the following command

What's New In Adobe Photoshop 2021 (Version 22.4)?

Three U.S. Army soldiers have died from injuries sustained in a vehicle accident in Afghanistan. The mishap happened just before 1 p.m. on Saturday on a road in Zabul Province. The soldiers were transferred to the American Air Force Hospital in Kabul for treatment of injuries and did not survive. “We stand in solidarity with the families of the soldier’s killed in the warzone of Afghanistan this week,” said Army Sgt. Maj. Brian Turner, Deputy Sergeant Major of the Army. “Our thoughts and prayers are with their families as they mourn the loss of their loved ones,” he said. The soldiers killed in this crash have been identified as Sgt. Johnathan C. Bales, 25, and Spc. John C.

Hennenbusch, 23, both of Fort Benning, Ga. and Spc. James Konrad Duckworth, 21, of Waukesha, Wis. Q: What is BigQuery's equivalent to PostgreSQL's SQL standard ANSI-style exception handling? PostgreSQL offers a way to write SQL syntax such that exceptions can be handled: DO \$\$ BEGIN BEGIN PRAGMA EXCEPTION_INIT(); UPDATE... EXCEPTION WHEN DUPLICATE_VALUE THEN UPDATE... END; END; \$\$; Is it possible to wrap such handler in a loop or something of the like? A: In BigQuery's handling of errors, when a statement fails, the response is in the form of an error event (e.g. jobs.status.errors, tables.files) with a human-readable message, the field

message -- which can also contain debug-level information and a link to the job's response in Cloud Composer's trace viewer, if it exists. Here's an example workflow that would return all the unique values in a table: with errors as (SELECT 1 UNION ALL SELECT 2 UNION ALL SELECT 1, 3 UNION ALL SELECT 4, 5) SELECT 1 AS id, 1 AS count, message,
