Steps to Create an Oil Painting Effect **1.** Open an image that you want to simulate the look of an oil painting. Click the **Image** menu and choose **Edit** ▶ **Preset Manager**. In the Preset Manager, select a brush preset that resembles oil paint strokes, such as the example shown in **Figure 6.10**. The preset can then be applied to the image to create a masterpiece. **Figure 6.10** : Oil-paint brush stroke **2.** With the paint stroke brush selected, duplicate the tool by right-clicking the brush and choosing **Duplicate Brush**. In the original window, click the **Paint Brush Settings** square at the bottom of the window. Choose a new color from the color box, such as the warm red/orange of the color box shown in **Figure 6.11**. The color box you choose will match the colors of the brush strokes on the canvas

Q: Using .htaccess to remove trailing slash at url with multiple trailing slashes I have a site with content stored at `www.mydomain.com/folder1/folder2/folder3/file1.php` I need to modify the site and remove the directory list so that a URL that displays at `www.mydomain.com/folder1/folder2/folder3/file1.php` would display at `www.mydomain.com/folder1/folder2/folder3/file1` I've tried using a RewriteCond but not having much luck. I've tried numerous different versions of this, but without success. I currently have the following mod rewrite at the moment in my .htaccess file RewriteEngine on RewriteCond %{REQUEST_URI} /folder1/folder2/folder3/file1 [NC] RewriteRule ^(.+?)\folder1\folder2\folder3\file1/\$1/\$2/\$3/\$4 [L] If someone can give me a few tips in the right direction, that would be great. The main challenge is that when I type `www.mydomain.com/folder1/folder2/folder3/file1` into the address bar it opens `www.mydomain.com/folder1/folder2/folder3/file1.php?` Thank you in advance, A: `(.*)\folder1\folder2\folder3\file1\?$` should do the trick if you have mod_rewrite enabled. `?` is here for the default "stop processing" match, which would be here on page load. By matching anything, you would be "processing" the full URI through the rest of the matching rules. If you require the trailing slash, try `(.*)\folder1\folder2\folder3\file1/$` instead, which will still remove any trailing slashes. Alternatively you could try `$0` if you do not want to remove any trailing slashes. Q: unexpected token in string literal A class has an attribute typeof next to show the type of the following variable. let j = 10; console.log(j.typeof(next) + " " + j.typeof); ERROR: Uncaught SyntaxError: Unexpected token ILLEGAL

Given $f(x) = x^3 - 9x + 3$, we can get 3 intersection points. Is it possible to get more intersection points? If so, how to? A: It is clear that the roots of the cubic are the roots of the equation $x^3 - 9x + 3 = 0$ Now when $x = 3$ we have: $x^3 - 9x + 3 = 0 \rightarrow 9(3^3 - 9) = 0 \rightarrow 9 = 0 \rightarrow x = \frac{3}{3} = 1$ Therefore $x = 1$ is the only root of this equation. We should check whether there is any other real root, and if such root exists then it should also have the same value and it would give us another root. The function x^3 has a global minimum, if we go beyond that and we can have another root, then, $f(x)$ has one more real root.
