Understand image files Image files are the compressed form in which we see our photos, but they also store a lot of information about how the image has been created. If you can interpret this information, you can modify, enhance, or alter the image before sharing it online or printing it. So how do you read the information that image files contain? Photoshop comes with a helpful tool known as the _file inspector,_ which is like a magnifying glass for the file and displays some information about the image such as the name of the file and the file format (see Figure 1-1). FIGURE 1-1: Use the file inspector to view important information about the image. In this figure, you see that the file is a TIFF image, and you can see the file's resolution is 4,096 x 2,048 pixels. You can also see that the image is an RGB image, which is by far the most common file type. (The _R, G,_ and _B_ values indicate the red, green, and blue color values of each pixel.) You can add additional information using image-editing programs such as Photoshop. For example, you can add _Copyright_ information using the Comments dialog box, which you see later in this chapter. Many of the image-editing programs have similar functions, and learning about them is important. (For more on editing tools, see Chapter 6.)

Next Generation Research Architecture (NGRA) Next Generation Research Architecture (NGRA) is part of a new generation of NLB research architecture in China. NGRA has five basic functions: SEER, DEC, NET, NDL, and DTS. SEER (Super-easy Environment for Research) is the scientific platform of NLB. There are presently 18 research disciplines and research teams which are conducting major projects at the frontiers of science and technology. The main task of the SEER is to provide the basic platform of NGRA, and the research goals are that SEER can provide the common integration environment of NGRA. DEC (Digital Environmental Cloud) provides an integrated digital ecosystem that allows applications to be provided at the web level. NET (Networked Ecosystem for Collaboration) provides an open and innovative environment for the interdisciplinary collaboration of natural science and engineering. NDL (Network-based Distributed Learning Environment) is a support environment for Digital Library. DTS (Digital Testing Service) is a service platform that allows users to search digital resources and perform the analysis of digital data. The SEER, DEC, NET, NDL and DTS are running together in order to form a new generation of NLB research architecture.GETTY ISIS have released a video showing the moment the London Bridge attacker killed Muslim students during the holy month of Ramadan FREE now and never miss the top politics stories again. Please see our Privacy Notice for details of your data protection rights. The video was uploaded to a jihadi-sympathetic Islamic State propaganda channel on Sunday, but has been uploaded to the same channel earlier today. Just seconds into the clip, the attacker can be seen approaching the students and stabs one of the 12 in the chest. GETTY The terrorist stabbed and killed the 12 students as they were in their mosque for night prayer Before the attacker can move on, however, he is knocked down by a fellow student. The jihadi is not sure what to do with the student and then is stabbed repeatedly. Another student is then seen in the crowd, handing a knife to a policeman - but the knife is broken in the struggle. The only wound inflicted on the policeman was a cut on his hand. The attack took place on Sunday night while the students were in their mosque for night prayer. GETTY

Fourier transform infrared microspectroscopy of histone core particles and nucleosome core particles. Fourier transform infrared spectroscopy of histone core particles and nucleosome core particles isolated from calf thymus has revealed the composition of their non-proteohelically folded DNA. The ratio of the helically unwound DNA to the beta-sheet DNA in these particles was determined by difference spectrum analysis. The ratio of non-proteohelically folded DNA to the beta-sheet DNA in histone core particles was found to be approximately 0.85, whereas the ratio in nucleosome core particles is approximately 0.40. An analysis of the samples, prepared from dried hydrated particles, has also shown that the asymmetric units of the cores are substantially identical to those of the histone octamers.title: Fortinet NIDS Sensor id: 062f1ee4-a99b-44a3-a307-4ba85d82e725 status: experimental description: Detects Intrusion and Denial of Service attacks using the FRT sensor. author: Florian Roth date: 2016/10/31 modified: 2019/01/10 references: - logsource: product: fortinet service: threat intel detection: selection: TH_ID: (62f1ee4|0be226ca) TH_IPS: (192\.168\.188\.18|192\.168\.188\.19|192\.168\.188\.31|192\.168\.188\.32|192\.168\.188\.35|192\.168\.188\.36|192\.168\.188\.49|192\.168\.188\.50|192\.168\.188\.51|192\.168\.188\.52) TH_PCI: (XXXXXX) TH_ACTION: (activity|alert|attack) filter: ip:
