## AutoCAD Serial Key (Updated 2022)

AutoCAD runs on the Windows platform. Since AutoCAD releases are frequently made available for free, it is common for users to run multiple copies of the program on their computers, which increases the risk of unauthorized third parties accessing their company's confidential drawings, especially when they are stored on a network server. The first Autodesk product to use the OpenGL graphics API was AutoCAD 2000, released in 1999. It was the first CAD program to support direct rendering of OpenGL graphics. The OpenGL graphics API is no longer supported in AutoCAD 2010 and later; instead, newer APIs for CAD are being developed, such as the Direct3D API. In AutoCAD 2008, the Open XML Paper Specification (OpenXPS) was introduced, creating the first fully open industry standard for both product description and creation, which was later enhanced to support file formats such as PDF, CALS, BMP, EPS, and more. CAD applications can open and edit this standard format. The standard was then revised in 2015 and is still under development. Hardware In the past, AutoCAD was available only as a PC-based program. In recent years, however, the use of the AutoCAD functionality in mobile devices, such as smartphones and tablets, has grown. In 2007, the second version of AutoCAD Mobile was introduced. It provides access to AutoCAD drawings from smartphones and tablets. It is also possible to use a mobile device to create and save drawings. Using the .NET platform, since 2008, it is possible to develop mobile-enabled applications. AutoCAD mobile apps can read and write data from and to SQL Server, Oracle, and Access databases. One of the earliest known examples of the use of the Internet to share drawings in AutoCAD was the 1982 document-sharing system ADQ (Advanced Drafting Quickly) developed by Autodesk. After users were required to type in a drawing from an AutoCAD file on their computer, they could share their work with others. The system also supported co-authors working together in real time. In 1989, AutoCAD introduced the USR messaging system. This allowed sharing information between AutoCAD and other applications, such as MS Word. In 1995, the ObjectARX project was started by Doug Henwood. In 1996, Henwood filed for ObjectARX as a US Patent. ObjectARX provided the foundation for many of the programs that came
