Tourette syndrome (TS) is a psychiatric disorder characterized by 1) the occurrence of multiple motor and phonic tics; 2) waxing and waning course and intermittent exacerbations; 3) a family history of tic disorders, and 4) onset before 18 years of age. It affects both males and females equally and is more common in those with an inherited TS susceptibility gene. Evidence suggests that genetic and environmental factors act in combination to cause TS. Diagnosis is generally based on the presence of multiple tics in the presence of a TS-like illness. Despite its prevalence, effective pharmacological treatment for TS is not available. Management of tics is a considerable challenge for parents and families. We have reviewed the literature regarding the epidemiology, etiology, clinical and developmental characteristics, comorbidities, ca3bfb1094
