AutoCAD is a BizTalk Server 2005, 2007, 2010 and 2012 product in which the components of BizTalk Server are licensed separately from AutoCAD. Component model AutoCAD is based on a component model: CAD components Presentation layer (UI) Business logic Data model AutoLISP Visual

LISP (variable-length language) Application object Presentation logic Layout/pose/etc. Most of these components are implemented in Autodesk Delphi programming language, including: Presentation layer (UI) Layout/pose/etc. AutoCAD ObjectARX, the base of AutoCAD's Visual LISP programming

language, also utilizes the RDO component model and is capable of representing most CAD components. This model has been superseded by its successor,.NET. Notes References Bibliography External links Category:Autodesk Category:Computer-aided design software Category:CAD software

in Xamarin.Forms? This question has been asked before, but it's for Xamarin.iOS. I've looked in the Xamarin.Forms assembly, but I couldn't find anything there. Does anyone know if there's a way to disable the "Toast Notification" style in Xamarin.Forms for Android? I don't need to actually show the toast

notification, but I need the user to see it. A: It sounds like you are creating a custom renderer for Android and perhaps trying to enable some kind of toast style. But the Toast.makeText call itself will show the Toast, so you can't disable that. /** * @license * Copyright Akveo. All Rights

The National Security Agency has a spooky new tool in its arsenal: a mechanism that can jam the signal of smartphones and other

consumer electronics in a huge area of the world. A top-secret "jammers" program called MUSCULAR was revealed in a 2012 internal memo to the NSA by a group called Booz Allen Hamilton, the NSA's top-secret domestic intelligence-gathering organization. The secret document, leaked by

former NSA contractor Edward Snowden, describes a means for jamming cellphone calls and text messages, as well as cell-tower data, over an enormous geographic area—all at the same time. The NSA's 'jammers' can supposedly be controlled by a computer command and include "vast

amounts of intelligence" that it can sift through. The capability was not, however, ever used in a mass-surveillance operation, according to Snowden. As the program was revealed by the Guardian earlier this month, an NSA spokeswoman called the use of "jamming" as a technique by the agency

"analogous to a rock thrown into a lake." And at Booz Allen Hamilton, it's said that the jammers' function is to block electromagnetic transmissions that could have an effect on "both U.S. and foreign military systems" when the U.S. military is conducting operations in a foreign country. However, unlike,

say, an air-to-air missile or ground weapon, it is unclear how the use of jammers might even be classified as an "operation" at all. But the use of cell-towers by spies is an example of "operations" used by the U.S. government. In that example, the NSA used "jam
