History AutoCAD 1.0 The first version of AutoCAD, published as AutoCAD 1.0 in 1987, was a program called "Multimedia Design,"

written by Martin Daniels and his team in Edmonton, Canada. After the "multimedia" part, AutoCAD stands for "Automatic CAD." In fact, the name was coined by the advertising agency McCann Erickson's creative director, who created the memorable tagline "Imagine something you can do faster with AutoCAD, and AutoCAD can do it automatically." The first product was developed by two people, Martin Daniels and Kirk Randles, on a stolen disk drive. Autodesk AutoCAD 1.0 was first released on July 23, 1987. The user was able to draw freehand. It was a technical demonstration and first product that was a significant success because of the cost at the time of the software and the software's ability to create entire drawings without human intervention. AutoCAD 1.1 AutoCAD 1.1 was released in 1988. It added features such as true point-to-point drawing, spline and Bézier curves. Originally, Bézier curves were difficult to use, as they were limited to a maximum of 8 points. AutoCAD 2.0 AutoCAD 2.0 was released in 1989. It expanded upon the capabilities of AutoCAD 1.0, introducing new features such as text, dimensioning, and styles. AutoCAD 2.5 AutoCAD 2.5 was released in 1992. It included three new tools: the ability to change the display from 2D to 3D, to be able to edit drawings with text or dimension lines, and to draw things like pipe and electrical lines that follow the surface of a 3D model. AutoCAD 2.5 was significantly different from previous

Ocular findings in late-onset type 2 diabetes mellitus: observations in 101 patients. To determine the prevalence and nature of ocular manifestations in patients with late-onset type 2 diabetes mellitus (T2DM). Retrospective, cross-sectional observational study. We assessed 101 T2DM patients, aged 47-79 years. In each patient, all ophthalmic examinations were performed on the same day. The variables analyzed were age, sex, history of hypertension and dyslipidaemia, duration of diabetes, history of smoking, hypertension, and dyslipidaemia, ocular symptoms and history of ophthalmic disease, and intraocular pressure (IOP) at presentation, HbA1c, fasting blood sugar, creatinine level, and blood urea nitrogen. The presence of retinopathy and associated neuropathy was examined with direct fundus examination, direct ophthalmoscopy, kinetic perimetry, and electroretinography. Ocular symptoms were present in 19.8% of cases, and 17% complained of blurred vision. Ocular signs were present in 55% of cases, and 20% complained of visual acuity less than 0.6. When signs were considered, they included hypertensive retinopathy (
