The program offers two approaches to save your progress, and it includes no extra features. Download multiple files from a list One of the first things you should note about this program is that it does not include any extra features. In fact, the entire point of the software is to download a list of URLs and save them all as part of the same job. The

application works similarly to other download managers, except that it can save multiple files at once. For example, you may need to download the latest builds of programs from a remote server. You could then save the build in the Local Folders section of Windows, and if you uninstall the application later, these files will remain untouched. This example could be quite handy for programmers who need to download a new release of the software they use on a regular basis. If you install this application as a portable app, your downloads will remain in the saved list even if you close the program. However, downloading a large number of files will be tedious with Batch URL Downloader, for obvious reasons. If you need to save a large number of files, you will have to download one from the list at a time, which is time consuming. It is also worth noting that you can't download a large number of files from the same server more than once, so you can't save files from different URLs to the same folder.

Minimalistic download manager The program is simple and sleek, and it doesn't offer any extra features. The biggest flaw with Batch URL Downloader is the limited number of downloads you can save at once. You can download up to 200 files using this tool, which isn't many for most people. It is also worth noting that the program offers no advanced features
