The video is also posted on YouTube: A: For those who may be interested in a space-efficient solution for encoding Taz and Bugs into a single image: I took a look at the following approach using the tool ImageMagick, which is an image manipulation tool that supports JPEG 2000 compression: Export all images as 200*200 JPEG files Use ImageMagick to resize the images to 100*100 Now resize the layer that contains the two characters (without the top or bottom of the image) to 200*200 Save the result as a single PNG file: screen.png [The above may be slightly less than optimal, as the resulting PNG file would be larger than the original JPEG image.] Here's the resulting code. It works on Mac and Windows with Python 2.7 and ImageMagick 6.9.7-8.

```
#!/usr/bin/python # coding=utf-8 import os import
subprocess # -- This is a slightly modified
implementation of the original function # -- based on
the following resources: # # # def
writeToPNG(fileName, data): # Write the file (which
stores the file name) file = open(fileName, "w") #
Write the png data file.write(data) file.close() # Make
the file executable chmod(fileName, stat.S_IEXEC) #
Run the command proc =
subprocess.Popen(["/usr/local/bin/convert", fileName],
stdin=subprocess.PIPE, stdout=subprocess.PIPE,
stderr=subprocess.PIPE)
```
