Technical Field The present invention relates generally to computer systems; and, more particularly, it relates to intelligent portable computer systems. 2. Related Art The market for portable computers (personal digital assistants, laptop computers, and the like) has been largely growth-driven. As the number of portable computer users has increased, portable computers have become smaller, less expensive, and more versatile. In spite of its many advances, the basic design of a conventional portable computer is difficult to alter, and this impedes the ability of manufacturers of portable computers to quickly and inexpensively design new products which satisfy the needs of consumers. One of the limitations of the portable computer industry is the minimum size of a hard disk that can be

incorporated into a portable computer. Conventional portable computers have small hard disks which are insufficient to store substantial amounts of data, such as digital music or video. Another problem of conventional portable computers is the durability of the portable computer. Conventional portable computers are heavy, even when filled with full size conventional hard disks, and are therefore difficult to carry and use for long periods of time. As a result, portable computers are frequently used as an information repository in which data is later transferred to other data storage devices. This requires a user to carry a plurality of portable computers because, unless the data is later transferred to
