Microsoft SQL Server 2008 R2 System CLR Types Crack+ Product Key Full [Mac/Win]

The System CLR Types contains a collection of T-SQL functions, CLR procedures, SQLCLR User-Defined types and provides a set of industry-standard object-relational mapping functions, which map standard database types to CLR types. When used as an object-relational mapping library, it converts standard database types to CLR types in order to provide safe and direct interop with Microsoft SQL Server CLR objects and .NET Framework types. SQLCLR User-Defined Types can be used by developers to define their own CLR user-defined types, which can then be incorporated into existing databases or projects. SQLCLR User-Defined Types can be defined and used by system-level administrators to provide database administrators with a set of support tools. System CLR Types is available in all editions of Microsoft SQL Server 2008 R2. SQLCLR types can be defined at application or database level. These types can be defined at database level, or they can be global types that are available to all users. SQLCLR User-Defined Types can be used to provide Microsoft SQL Server 2008 R2 support for spatial data types. SQLCLR types that are defined and used by system-level administrators are also provided with SQL Server 2008 R2 Native Client.
