connection, is what I want to do. I need to be able to download hulu or something free and play it from anywhere like at a friends house or a car or a dorm room.

What I want to do is go to hulu and it downloads to a file and then i can just take that file and play it anywhere. Does this make sense? what is the address code of a cpu MHz to MHz of 0.1~0.3 in cs-3 remaker 18 r5 i have to make my cpu as slower as possible i am not aware of a manual code any of you guys suggest a trick or something? I do not have a printer, but I'd like a small USB printer like the £40 KOOLINK Digital Mini. But when I plug it in, it doesn't work. The light on the printer goes on, but nothing prints. Any ideas? I want to delete a video off of my iPad 2. It is a backup video I made on my iPad 2 and has some music. I can no longer remember the password to the app, so I'm unable to access that file. Is there any way to delete that file? I have been downloading files from the internet that were supposed to be 700 MB but were only 400 MB. I have downloaded a directory of files and the directory of files has only 400 MB in size but when I browse to it I can see all of the files in there! I have deleted and re downloaded the directory to make sure that it was just one file that was in there. It is not.
