What is new in official Multi-Copy-Paste 1.2.8 software version? - The most popular and efficient clipboard cleaner. Multi-Copy-Paste is an ultimate clipboard history manager allowing you to easily store and reuse the data. You can define the type of information you want to keep in your clipboard and store it in a unique history list. Copy files to clipboard, paste files from clipboard, copy text, paste text, clipboard history manager. Automatically stores all the data that are copied to clipboard. Quickly select all the text that is cut by any software. Clear all the data from your clipboard history in a single mouse click. Watch list of copied items in the history: you can easily re-use them later anywhere you want. A small utility that will save you precious time whenever you have to insert some text in any application. You can use it as a clipboard bookmarks management tool. Multi-Copy-Paste Requirements Operating systems: Windows XP, Windows 7, Windows 8, Windows 10 Multi-Copy-Paste Free Download Similar Software: Multi-Copy-Paste Similar software can be found below. Embed Multi-Copy-Paste All rights reserved. Software available in default English multi-copy-paste. You can freely copy the customized copy-paste lists to your computer's desktop. Multi-Copy-Paste - is a small clipboard monitoring tool that gives you full control over the items places in the Windows Clipboard. The application was developed to automatically store all piece of text or files that reach the Clipboard and then let you reuse the data at any given moment. It's all possible through a bit cluttered interface that may need a few minutes before you figure out the purpose of each tool, but it's all just a matter of time. There are two tabs, "Text View" and "Files View", each providing access to the collected data. The stored entries can be edited, removed or reused in any other application, while dedicated options enable you to paste or clear all items with just one click. There are no options to play with, but Multi-Copy-Paste gives users the chance to save the list of stored items to a MCP file that can be later imported back in the app. Just as expected, Multi-Copy-Paste runs on low resources and doesn't hamper system performance in any way, working smoothly on all Windows versions out there. Overall

#### What's New In Multi-Copy-Paste?

Monitor the Clipboard and keep a history of all the entries that end up in there Clear all Clipboard items with a single click, paste data one by one and save Save Clipboard items in a nice, easy to use MCP file that can be later imported back into the app Automatically add all text from files and the clipboard Automatically remove all Clipboard items once the files are removed Multi-Copy-Paste Review: 7 Overall: Features: Function: Performance: Value: Recommendation: To use Multi-Copy-Paste, you just need to launch the application and make sure you are using the "Files View" tab. If it's not there, hit Ctrl + I and search for it. The applications display will show as soon as you click. Then scroll down to the bottom of the interface where you will see the "Add" and "Clear" menu. While the "Add" is pretty self-explanatory (storing the current data in the clipboard), the "Clear" function will clear the clipboard from all of its items. The interface of Multi-Copy-Paste is quite cluttered as there are many windows to go through. Even to get to the options, you need to click on the small triangle in the upper-left corner of every window. Once you get used to how the application works, it turns out to be quite simple, especially when it comes to pasting/copying/clearing items. However, there's no help button anywhere in the interface, so you have to read everything before trying to use it. If you have several windows open with file names you need to copy, the interface is a bit annoying as it doesn't tell you if you just imported a file or copied it. We can't really say much about the performance of Multi-Copy-Paste, as we didn't encounter any problem during our test. The application doesn't do anything harmful to the PC, which is a good thing. However, the lack of information about what's actually going on could be a nuisance for someone new to the world of clipboard monitoring tools, especially when they try to use the "Clear" option.  
</>"; } else { echo "th and lowcharts are not correct";

---
