Supporting new features in this version, is the most significant update of the app to date. In this release, we have decided to rework the whole process of creating and playing music in RESPITE. The application relies on professional platforming elements as opposed to the typical use of Android gaming genre; this resulted in the alteration of the controls, the primary feature of the app; the APP now features a minimum of 23 different LIVE locales to discover, branching paths, an entirely brand new game design and a new journey along with a new set of challenges. We are aware of the vast changes in the way that players play the game and how people are supposed to play it. This is why we have spent a great deal of time rewriting and redesigning our custom-made engine to respond to your needs and convenience in a new and modern way; this includes the addition of a lobby to challenge your friends and compete against them, the addition of leaderboards, an in-app chat and much more. All the previous features were always the foundation of the game experience: the new way of making the app was possible because of the "old" user experience. This results in: New Journey Variable Speed Controls Fully localized to 21 different languages and dialects, in addition to English (US, UK and the rest of the world) We are still in the process of adding new features, new locales and new content.
