It is a simple and easy-to-use application that can be used to either emulate the looks of the Windows Vista or Windows 7 operating systems while preserving the original functionality. The application can easily be run via a live CD because of its bootable nature, so there will not be any additional software installation required. In other words, it will replace the original Windows installation and thus, there is no need to uninstall it or format the hard drive. Additionally, by running this application via a custom made ISO image, its installation will not be affected and the system files will not be modified. Thus, uninstalling the software is not possible. Winsim is the software that really needs to be installed during the installation of SevenMizer. SevenMizer can work on Windows XP and Windows 2003, but it only installs on Windows Vista and Windows 7; it will not work on those operating systems that are older than Vista. SevenMizer's main purpose is to create a near-perfect emulation of the Windows Vista or Windows 7 operating systems, without modifying the original Windows installation. As an added feature, the installer includes a tool that can easily be used to create custom made Windows 7 bootable CDs. SevenMizer supports all major common video cards (Geforce, ATI, Intel, nVidia, Matrox, and all others). Five million users downloaded SevenMizer software in less than a week after its debut! Windows 7 is a great operating system, but sometimes it is too "I'm better than you!" to the users' faces. How many times have you seen in a friend's or coworker's computer a Windows-7-looking interface on top of a Windows XP with the classic one? It is obvious that it is aesthetically pleasing, but what kind of effect does it really have on the computer's performance? These images can be used to create bootable CD images to install the newer version of Windows without installing the entire operating system on the user's computer. Two versions of the software are available. The Standard and the Pro version.
