The Complete Guide to SketchUp 2018 Ebook By Mark Simonson Ebola virus - Wikipedia Ebola virus (EboV), also known as Zaire ebolavirus, is a species of the family Filoviridae and the genus Ebolavirus.It is the cause of Ebola hemorrhagic fever, a deadly disease associated with high mortality rates.Ebola virus is named for the Ebola River in Zaire.In the ICTV classification, EboV is one of seven viruses of the Filoviridae family and the Ebola virus genus, together known as a Filovirus.[1]Ebola virus had been known since 1976, when an outbreak of disease and a high fatality rate occurred in Zaire. In 1995, a second outbreak in Gabon, resulted in a smaller outbreak. Currently, the only known natural reservoirs of Ebola virus are fruit bats of the Pteropodidae family, including forest bats (subfamily Hipposiderinae) as well as several species of bat guineafowl (genus Cracticus).In 1994, the virus was isolated and named after the Ebola River in the Democratic Republic of the Congo. Of the 26 different species within the genus Filovirus, EboV is classified as a member of the species Reston ebolavirus.
