SP1 is the final chapter of the Vista release saga. It is an update to the Windows Vista platform that includes new features, performance improvements and reliability enhancements. It also enhances Windows Vista's support for a variety of new technologies and programming practices. To date, Windows Vista has been hailed as the fastest and most secure operating system on the market. Now, Windows Vista SP1 will make it even faster and even more secure. Windows Vista SP1 contains a series of new features, known as Extended Security Update Services (ESUS), that address a number of Windows Vista compatibility issues. Windows Vista SP1 addresses specific reliability, performance, and compatibility issues, and provides support for new types of hardware. New updates and bug fixes were added to Windows Vista SP1. Windows Vista SP1 provides additional support for Microsoft Office 2007. Office 2007 applications have been updated with new features. Windows Vista SP1 also now supports the Microsoft Office XML format. Since the first public release of Windows Vista, Microsoft has made a series of improvements to Windows Vista. Windows Vista SP1 will increase the compatibility of Windows Vista with existing applications and devices, including existing hardware and drivers. Windows Vista SP1 will continue to make it easier for IT administrators to deploy and manage Windows Vista. In addition, Windows Vista SP1 will continue to make improvements to various features. New features included in Windows Vista SP1 include:

- Storage Spaces Technology, which will reduce the amount of time it takes to copy files to and from a storage device, and also to restore files that have been damaged or lost.
- Storage Spaces Recovery, which enables users to recover a system from a previously stored system image.
- Application Compatibility
- Microsoft Office 2007
- Extensible Authentication Protocol (EAP), which adds support for 802.1X with RADIUS (Remote Authentication Dial-In User Service) authentication.
- In-Box Activation, which enables activating Windows Vista computers using the machine's serial number or other product key.
- Using a wireless network to activate a computer or device
- SP1 communicates with devices to activate and modify them without requiring a connection to the Internet

desktop connections, added support for Windows Live Connect and related features, and provides enhanced support for standard local area network (LAN) protocols. In addition to these changes, Windows Vista Service Pack 1 will include improvements to the reliability and integrity of the operating system, application compatibility, and device driver compatibility. A large part of SP1 is focused on improving the reliability and security of the operating system and how well it can handle hardware and software failures. SP1 includes a new process manager that helps minimize the impact of system crashes and maintenance tasks and minimizes the workload of the system. SP1 enables administrators to more easily manage systems with graphical interactive tools and remotely troubleshoot Windows Vista. In addition to the improved reliability of the operating system and fewer application compatibility issues, SP1 addresses compatibility with Windows Live Application Shortcuts. Microsoft Windows Live Application Shortcuts are single desktop shortcuts that enable users to quickly launch a Windows Live application from within the operating system. Windows Vista Service Pack 1 includes improvements and enhancements to applications built for Windows Vista, such as the Live Mesh team. The Live Mesh team is working to make it easier to use a wide variety of technologies including Windows Live Services, Windows Live Mesh, and Windows Live Applications. b7e8fdf5c8
