.Q: Delete all files not fitting given file criteria I am wondering how can one delete all files that do not fit the criteria in a directory, and its subdirectories. For example, I have directory 'Somedir' with files like this abc.txt bcd.txt And i'd like to delete all files that are not 'xyz.txt' in 'Somedir'.
A: Since shell does not have features like a do-while loop, it's a good idea to add a loop around the rm: for f in \* ; do if [ -f "\$f" ] && [ ! -f "\${f///- }" ] ; then rm -r "\$f" fi done
Add exit 0 in the end to exit the for loop after all files have been checked. If possible, -f could be replaced by -s. The former will handle character encodings and -s will perform a stat instead of checking the file type. It's more efficient to create a tmp file just for using in rm -r for f in \* ; do outfile="\${f///- }.tmp" [ -f "\$f" ] && [ ! -s "\$outfile" ] && rm -r "\$f" done
A: if you prefer to avoid loops: #!/bin/bash dir=\$1 shift for file in "\$dir"/\*; do if [ ! -f "\${file///- }" ] ; then rm -r "\$file" fi done
Thanks to aix for pointing out that the "\${file///- }" may need escaping if the file contains spaces. In this case I used the second character of a single quoted string, which is the 6d1f23a050
