So, why is that? How to fix it? EDIT: When my solution is to download the latest version from the CorelDRAW Graphics Suite site, it download the files without issues. A: Don't download the Windows installer; download the Linux version instead. (It would be good to know whether you can load the Windows installer but can't run it. If the Linux version works then you can use that one). A: I'm trying to run the same program on my computer, and it works fine. No issues. Please run the following to find the wrong one: Version number: FreeCorelDRAW2017 License number: CorelDRAW Graphics Suite 2017 v9.0 First check if the right one was installed, and what version it is.
