HACK HOFA-Plugins HOFA IQ-Eq V3.6.2-R2R [deepstatus]

Hacking?... i want to install 2 of my 3 topo maps on my gps but im unable to do it.. i tried to install them on my extender but it only worked with 1 map.. so i decided to install them in my computer but the same thing happened.. any help would be great.. thnx Networked GPS/Glonass GPS?... Hi, I have similar problems. I have a Topo NZ PrimeTopo, which I got years ago from a neighbor (already used). My GPS tracks the signal from NZ PrimeTopo and has no problem in pinpointing my position if I have the correct location data. . .. However when I start using my own location data I don't get the pinpoint signal. It will just track me for a few minutes if I drive slowly with my location data in. . If I use GPS-track instead of the actual location data (via Track) I get pinpoint signal. I have been at it for months now and I think I am nearly through. . Just in case anybody else is looking for help. .. I have an XT-6100, a kampfnet gpsv3 and gps device on my computer. . I want to hook up a strapine GPS (SPAN,, maybe SPSite?) and get location data from a arduino. . I just don't know how/where to start. . I have tried with the GPS devices I have and the arduino, but I can't get the pinpoint signal using the default tracking. . How do I get the track data with the default tracking? . At the moment I am using nothing as a reference but the default settings in the Topo NZ PrimeTopo. . I have spent literally months looking for help and suggestions. . I am desperately searching for help. Thank you for any help. Thanks . Networked GPS/Glonass GPS?... Hi, I have similar problems.
