has enabled us to begin a new project with 1003 and the WP8.1 phone.Q: Change PHP version in

web.config / IIS I can't figure this out, I've tried searching around and trying different solutions.

I have an asp.net website with a web api that I've extended with my own, legacy aspx pages.

On the aspx pages, I set the compiler to version 2.0. In the web.config, I have this: This is

currently on a web hosting service that runs IIS 6.0 on Windows Server 2012 R2. Unfortunately it's still hosting.aspx files (as they are the only code that can be compiled to exe) and they use the legacy version of PHP (5.2.4). I also have my own hosting that runs IIS 8.5 on Windows Server 2012 R2. I want to run the new version of PHP (5.6.4) on that website. I was going to use something similar to this: I haven't figured
