Thandor - Die Invasion PC ISO

1 Nov 04, 2010. EXE for:
Lucifox [ENG] (PC) - Thanks
SEARCH THIS WEB-SITE Â· ALL
OF THE IMAGES IN THISQ: How
to decode the Hexadecimal
format of a Data in Objective-
c? I have a sample of data like
E2:73:D2:56:82:B6:D1:02:9C:8
B:65:D3:7E:F6:40:B5:D0:9B:9
D:02:E4:CA:8D:04:0D:01:67:F2

:AC:F9:9C and i was trying to decode the same and got the output in hexadecimal like 144 82 9B 65 9D 02 E4 ca 8D 04 0d 01 67 fe ac f9 9c i want the code in hexadecimal like E5:63:3F:3A:56:8F:FD:A7:8A:9C:00:1D:95:BD:8A:7D:38 how can i do that? A: Have a look at the documentation: NSData Class Reference Specifically, for hex

This property returns the

hexadecimal representation of the data, using ASCII characters and always treating each hex character as four characters (e.g., "0x000" and "0x7ff" are identical). This means that your string is already in the right format, it's just one byte per character. It will be easier to use unsigned char to store each byte, for instance: NSString *hexString

```
= [NSString stringWithFormat:
    @"%02X%02X%02X%02X",
    data[0], data[1], data[2],
    data[3]]; NSString
*decodedString = [NSString st
ringWithFormat:@"%c%c%c%
c", c6a93da74d
```
