The new feature is listed as "beta," so use at your own risk. What is IOTA? IOTA is a cryptocurrency for smart devices and Internet of Things (IoT) devices. Unlike Bitcoin, it's not decentralized but rather maintained by the IOTA Foundation. Since the technology is based on the Tangle, it is different from other cryptocurrencies. And unlike bitcoin, it is built on the concept of enabling other types of financial transactions. How to buy IOTA? To purchase IOTA, users first have to open a Coinbase account. The account can be created and verified online, through mobile or desktop. Next, you have to confirm that you are at least 18 years old. Then you have to go to the Coinbase "Buy" section, located under the "Accounts" heading. The next step is to select the currency you want to trade. In the case of IOTA, that's the coin exchange. You can input the amount of IOTA you want to buy. Then you have to confirm that the amount you want to buy matches the amount you're selling. When this is done, you have to go back to the Coinbase "Add Funds" page. How to sell IOTA? This process is similar to purchasing IOTA, with a few differences. You first select IOTA as a currency to purchase, and then confirm that you have the amount of IOTA you want to sell. The currency you want to sell IOTA must be selected from the list on Coinbase c6a93da74d
